

SKILL 8

Steps to success

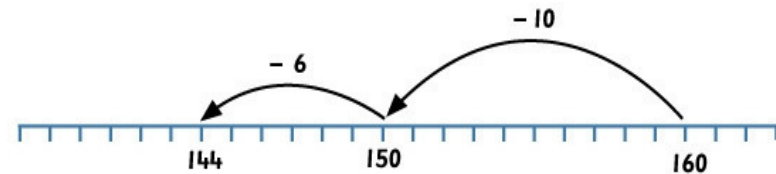

- Write the largest number at the end of your number line.
- Jump back the tens of the other number.
- Count back the ones of the other number.

How do we use a written method to subtract numbers?

To be able to subtract a two digit number from a two digit number using a numbered/land marked number line.

What is $160 - 16$?

Use the number line to carry out the subtraction (count back 10 from 160 to 150 and then 6 to 144).

$$160 - 10 = 150$$

$$150 - 6 = 144$$
