

# SKILL 1

How do we subtract numbers practically?

To be able to subtract a single digit number from another single digit number by taking away a number from a set of objects.

## Steps to success

- Count out objects to match the first number in the number sentence.
- Take away the second number from that set of objects.
- Count up all of the objects you now have left this is your answer.

3

$$4 - 1 = 3$$
