

Skill 1

Steps to Success

- Count out the number of objects that you need. This is the biggest number.
- Share these objects into the number of groups.

This is the smaller number,

- Check there is the same in each group.
- Your answer is how many are in each group.

$$16 \div 2 = 8$$

How do I divide using a written method?

To be able to share objects into equal groups and tell you how many there are in one group.
