

Skill 13

Steps to success

- Place the numbers you are adding together on top of each other.
- Make sure each digit is in the correct column according to its place value.
- Set out your diennes in columns above.
- Add the top digit to the bottom digit starting with the smallest unit.
- If the answer is over 10 then the number is carried to the next column and placed underneath.

How do we use a written method to add numbers?

To be able to add numbers using the column method using diennes alongside to help understanding.
