

Skill 8

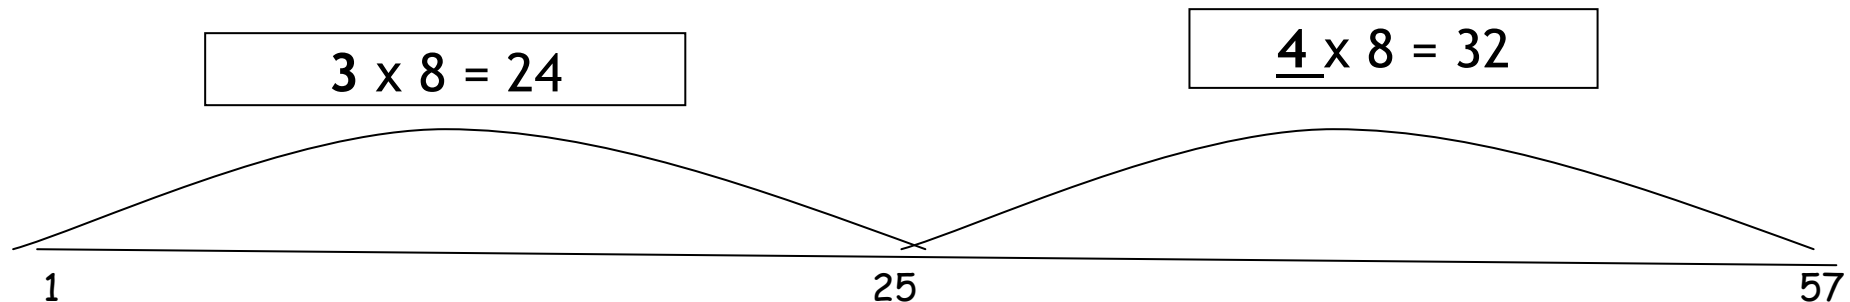

To be able to use chunking on a number line to do division

How do I divide using a written method?

Steps to success

- ✓ Start at the number you are dividing
- ✓ Subtract jumps of the number you are dividing by until you can take away no more groups of that number.
- ✓ Your answer is the number of whole jumps.
- ✓ If there is any number left over this is your remainder.

This is how we would work out $57 \div 8$.

We took off seven whole 8s, so the answer to $57 \div 8$ is 7 remainder 1.
